USPs OF THE COMPANY

EXCELLENT SUPPLY CHAIN MANAGEMENT WITH QUALIFIED SUPPLIERS

- Premium fabric and accessories
- Fine gauge fabrics (36" – 44")
- Full size range body size knitting set up
- Large range of circular knitted fabrics
- Nano-tech applications
- Experience in all kinds of fibers (natural, regenerated, man-made)

STORE BASED PICK & PACK SERVICE

- Shop assortments can be made for our customers
- Fast and effective process planning
- Direct delivery to shop floor

QUALITY ASSURANCE

1- QC of Fabric and Accessory Inputs

Being applied inside own laboratories with international standard equipments.

- Color fastness to washing
- Color fastness to rubbing
- Color measurement test / Spectrophotometer (Datacolor 800)
- Dimensional stability test to washing
- Moisture measurement
- For fabric
- For elastic
- Bursting Strength

On demand, cooperation with international and independent laboratories is also possible. Meantime, the suppliers' control reports help the tracking of control even before the inputs' deliveries and increase the level of service.

2- Process Control

It is all of the systematic controls performed by a competent team under the Quality Assurance Department to determine the level of instant product quality and to ensure excellent product output.

3- 100% Final Product Control

Having a lean production in Narkonteks Tekstil A.S., at the end of each production cell the quality control is applied to all finished products 100% and by regular reporting the level of quality could be tracked easily.

3- Final Control

The finished products are taken to a private final control area before they are taken to the shipment area. Quality control is carried out in accordance with the acceptable quality level in line with customer expectations.

Detailed reports based on deliveries / orders / articles can also be prepared for those who request. In addition, thanks to the technological infrastructure, system integrations could be carried out through the portal used by the customers.

DESIGN CENTER

DESIGN CENTER

Narkonteks Design Center, aims for the perfect design and production process, with a creative and unique approach using latest innovative technologies while respecting to human rights and environmental sustainability.

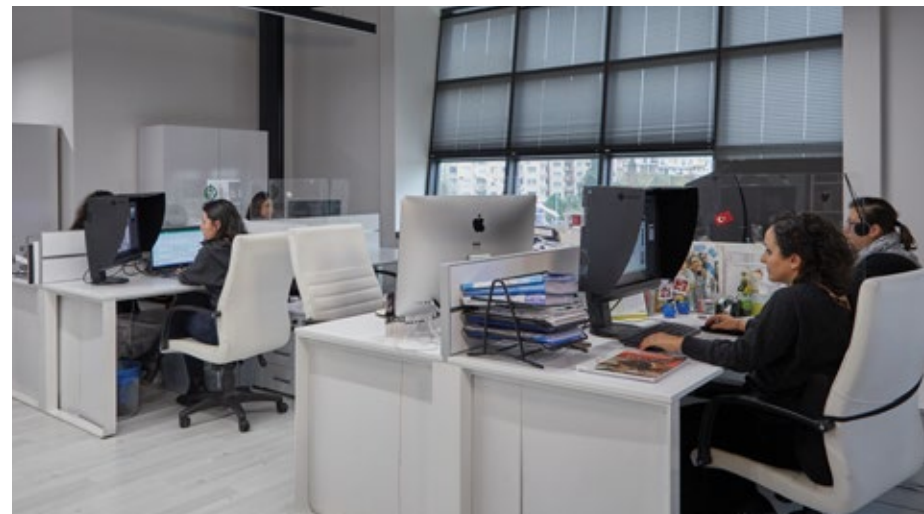

With a dynamic design team, our design center is capable of creating 500 prints and 1000 products annually.

3D DESIGN

We are using 3D modelling and best simulation techniques in our design process effectively, to be able to digitally visualize the items almost identical to physical samples.

Creating digital files of all items with their fits per size with technical drawings and 3D modelling, we are capable of monitoring details like traces of inner seamings. Always following fashion and trends, Narkonteks Design Center creates seasonal collections one year ahead of the sales season, and is capable of finishing at least three collections annually.

Our creative design center team with a leading 10 designers and stylists, and 50 patternshop employees; creates fashionable, genuine and commercial designs successfully, following fabric and accessories trends and innovative production techniques from both local and international markets.

SUSTAINABLE FUTURE

Today, sustainability is standing in front of us as a model by not only taking environmental balance and economic growth together but also ensuring efficient use of natural resources, raising the importance of environmental quality and meeting the urgent needs of future generations without endangering their own needs.

As Narkonteks Tekstil A.S. we are being inspired by protecting and maintaining these resources which are the basis of our existence and business.

By incorporating our sustainability vision into our corporate culture, we take steps for a better world to live in and achieve global goals altogether with our employees.

Thus, we established the Sustainability and CSR Department in 2017 in order to establish corporate infrastructure and principles related to sustainability.

This department, which takes the leadership in the efficient use of resources within the company, ensures the continuity of all certifications and audit processes as well as ensuring the corporate culture.

Efficient Use of Energy & Renewable Energy

We have taken a concrete step in our energy management system by implementing solar energy panels to all our manufacturing, logistics and operations buildings; which will help us save more than 500.000 KW electricity annually. We aim to obtain all the energy used in our production activities from renewable energy sources in the next 5 years. We use LED lights indoors. Among our production , we convert the suitable machines from AC motor to DC motor. We use new generation compressors with low consumption by operating the air lines used in production efficiently without leakage. We prefer air conditioning systems working with VRF technology indoors.

Manufacturing Waste Management

We recycle our textile and apparel wastes generated as a result of our production activities into reusable textile raw materials through official recycling companies in order to protect our environment and natural resources and reduce their impacts on the nature. We are recycling more than 100 tons of fabric from our manufacturing process.

A Forestation Project

We are working with The Aegean Forest Foundation by planting a tree for celebrating our employees' birthdays. We aim to plant 1000 trees annually in Bergama Kınık area of Izmir.

Recycling

We renew our Green Point certificate every year with the Çevko Foundation in order to collect the packaging wastes used in production properly and recycle them. As a part of our corporate social responsibility, we are recycling more than 33.000 kg of paper and cartons. With our waste management system, we are sorting contaminated fabrics, batteries, bulb wastes, cleaning supply packaging and electronic wastes and we are ensuring a total of 250 kg material to be recycled properly.

Environmental Management System

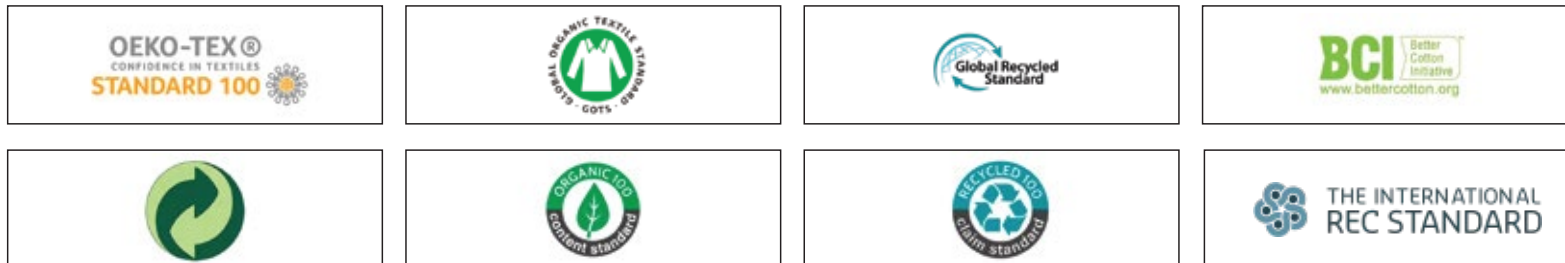

We take all kinds of measures to reduce water consumption. We are collecting the water from our purification units in tanks to use in garden sprinkler systems and lavatories.
We regularly renew our certificate of ISO 14001: 2015.

Corporate Social Compliance

For the continuity of our company's social compliance, we are audited by international social compliance and audit institutions such as BSCI and Sedex. We do not use child labor or forced labor in any line of activity. We take care that our working environments are livable, safe, clean and tidy.

Corporate Social Responsibility

We as Narkonteks Tekstil A.S., continue contributing to the society we live in by developing projects through various associations, schools and chambers of commerce within the scope of education and employment oriented social responsibility projects.

SUSTAINABLE PRODUCTION

Narkonteks Tekstil A.S. uses sustainable fabrics such as organic cotton, better cotton, bamboo, repreve and tencel throughout the product range designed and produced for men, women and children. Our company has certificates from international institutions such as GOTS "Global Organic Textile Standard", BCI "Better Cotton Initiative" and GRS "Global Recycled Standard".
